

TOP for g4superb

- Geometry
 - 18 TOP modules
 - 3-readout type for g4superb
 - Support structures
 - Honeycomb plates
 - Aluminum cylinders

g4superb-top

■ Hits

- Light propagation in quartz
- TDC output to panther table with PMT smearing

rectop

- Reconstruction code

- For 3-readout type

- Reconstruct ring image (=P.D.F.)

- Input

- PMT hit; Dattop_pmt
 - Channel number, TDC
- Tracking info; rectrk
 - Incident position and angle

- Output

- Likelihood for e, μ, π, K, p assumptions

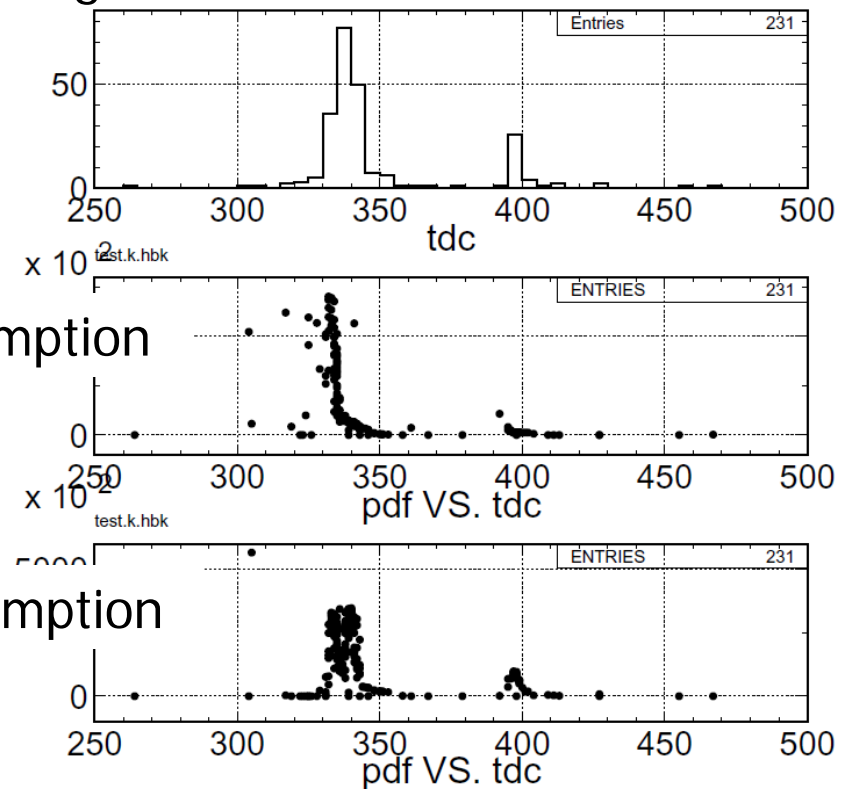

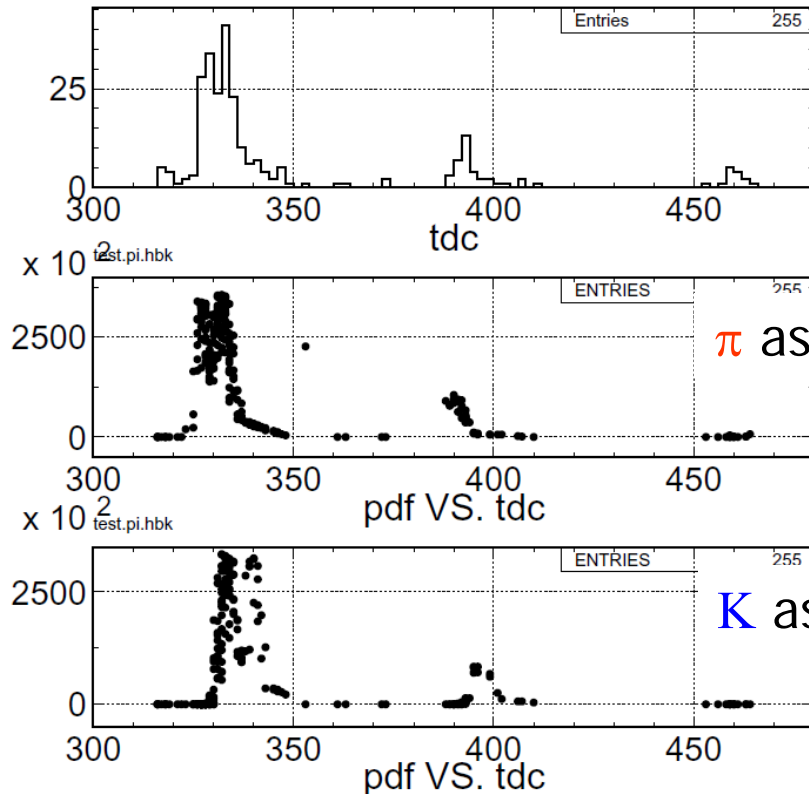

P.D.F. distributions

π^- incidence

2GeV/c,
 $\theta=70\text{deg.}$

K^- incidence

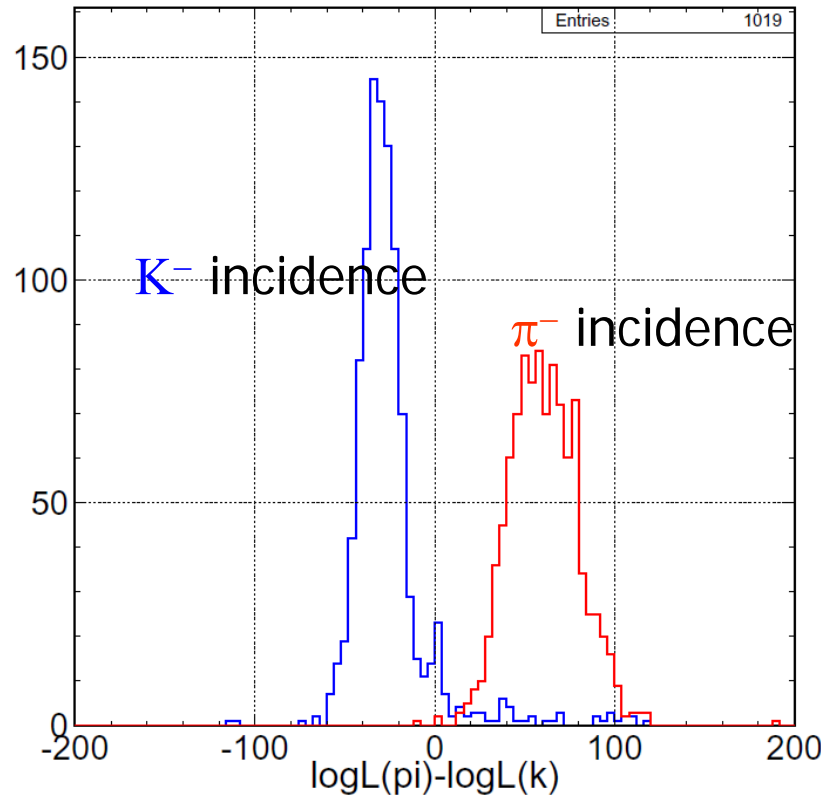

- Well reconstructed P.D.F.
 - Maybe small time offset

Output

- Likelihood ratio (π/K)

- Number of photons

- Reasonable output

Summary

- Basically working well
 - Correct light propagation and TDC distribution
 - Proper Ring image reconstruction
 - Output likelihood as expected

- To Do
 - Check performance for several incident momenta and angles
