

# Next version of new shaper- digitizer module

Vladimir Zhulanov, Yury Usov

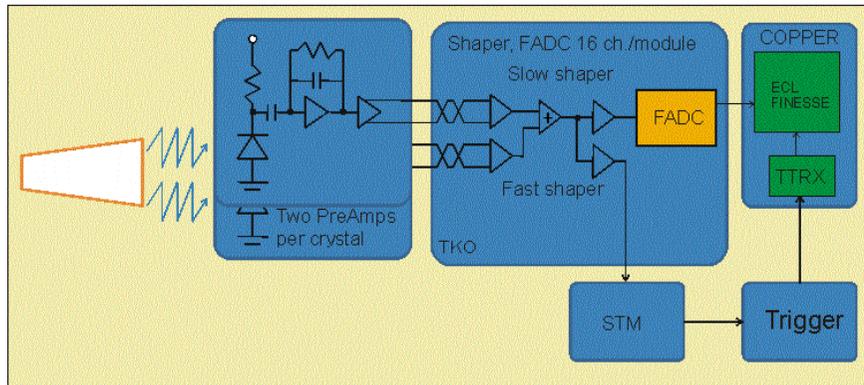

BINP, Russia

2009.03.19

# Update of barrel electronics

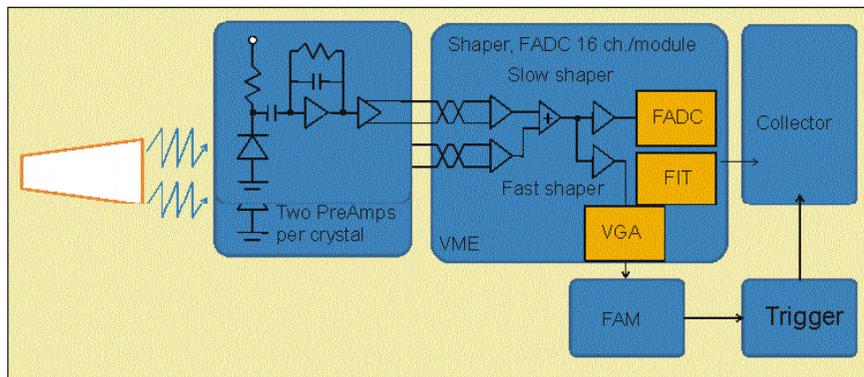

Current electronics  
Belle  
Q – T – D

Shaper-ADC

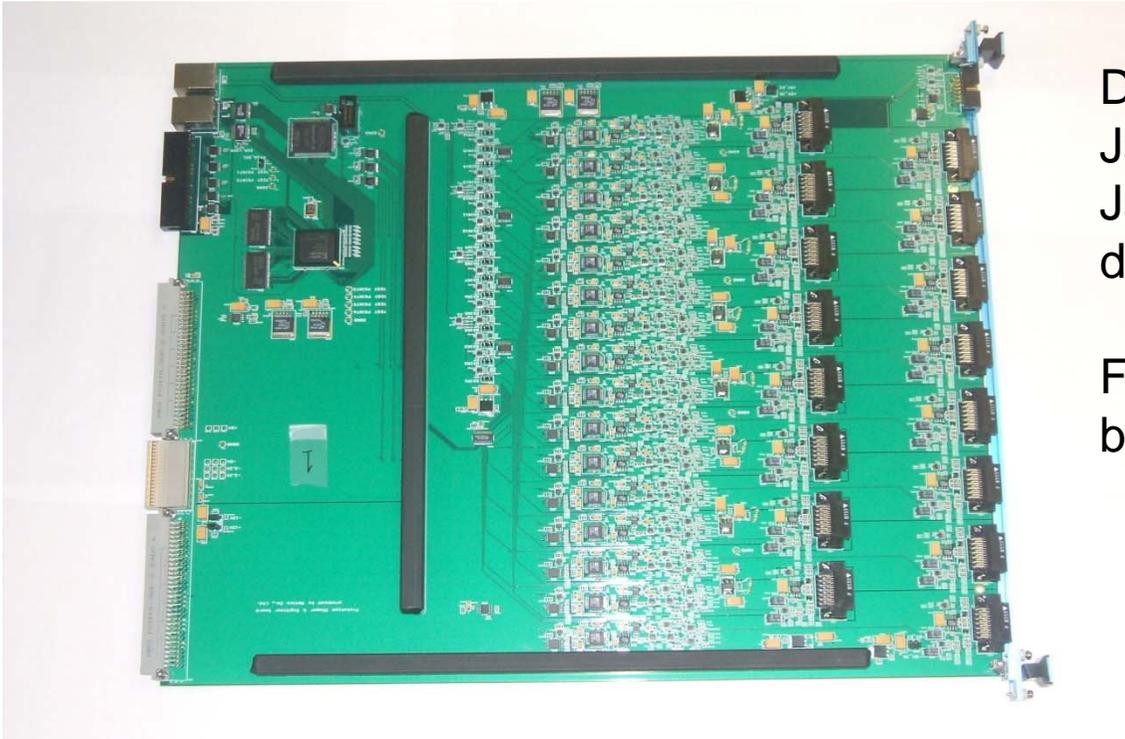

SuperBelle  
FADC, pipeline

Shaper-DSP

SuperBelle  
FADC, pipeline, DSP on shaper board

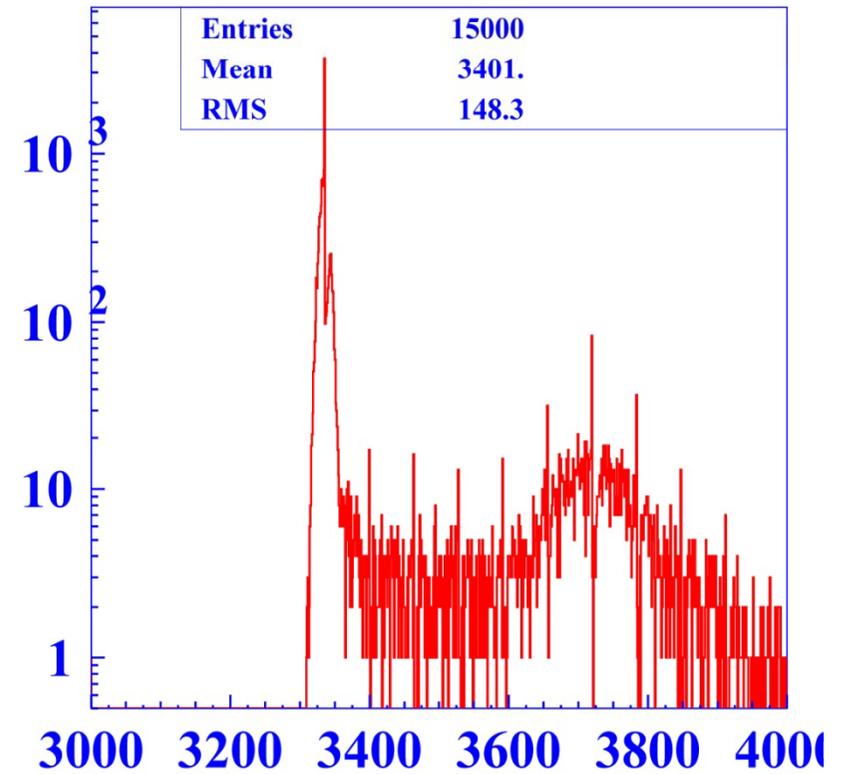

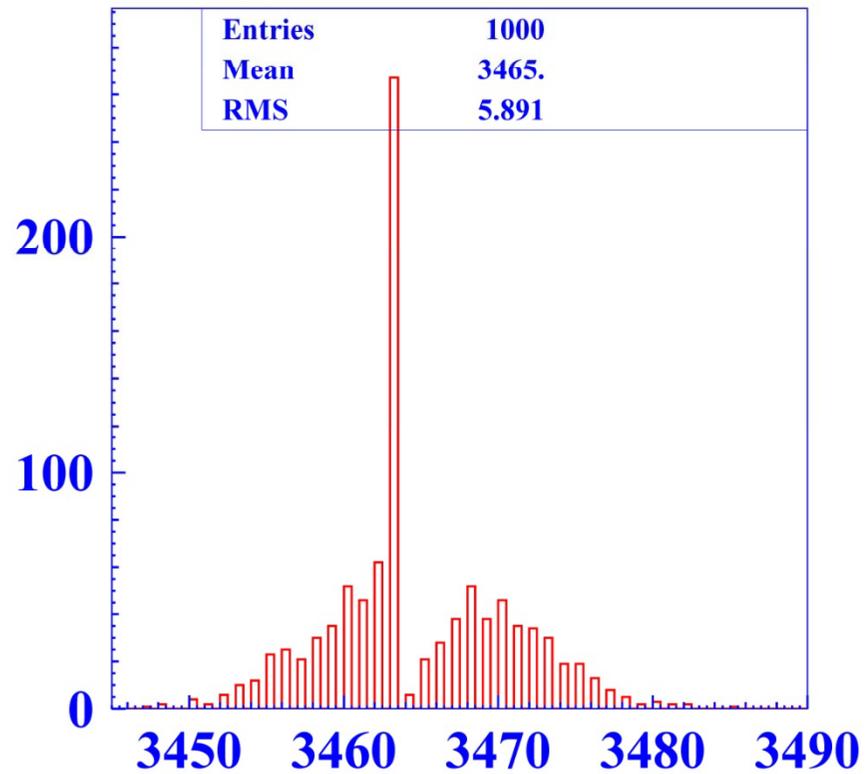

# Shaper-DSP

Dec.2008 – manufactured  
Jan.2009 – shipped to KEK  
Jan.2009...now – firmware  
development, tests

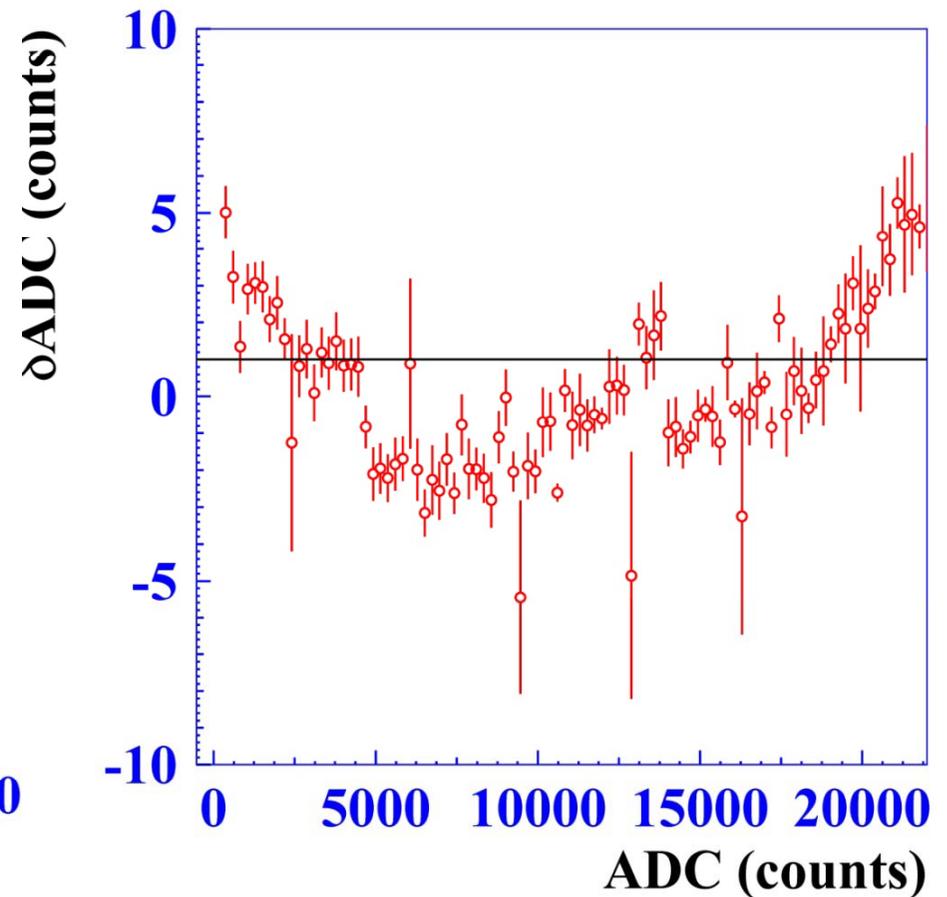

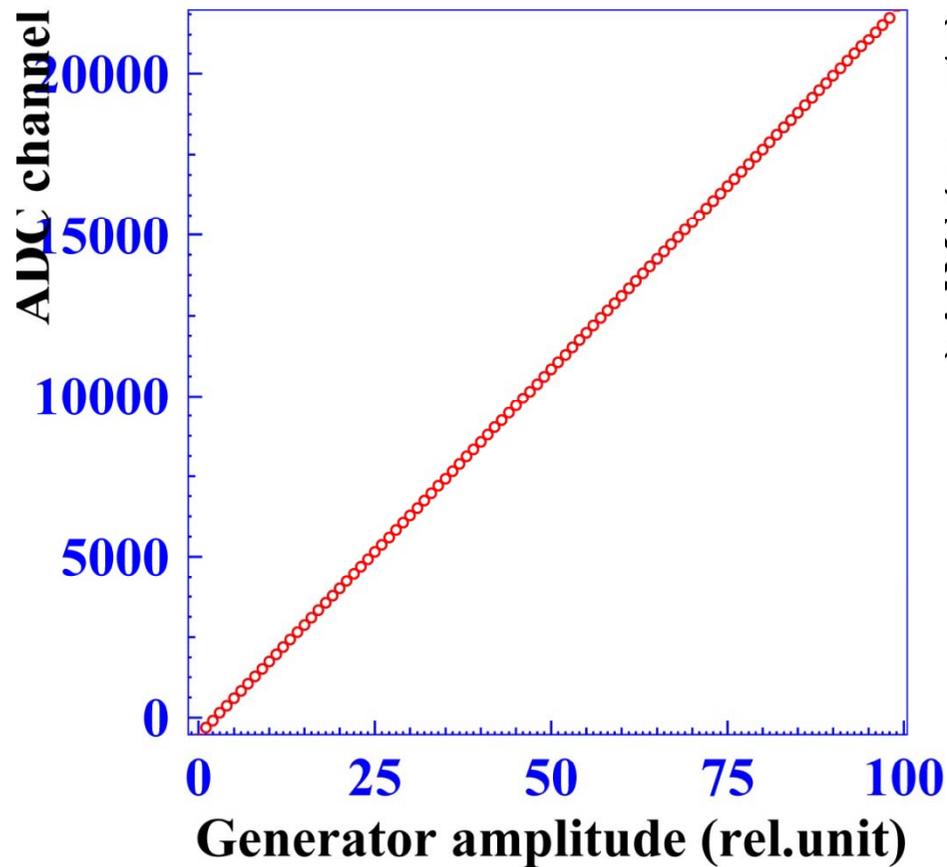

Few modifications have  
been made

# Noise

Some ADC or PCB layout problem

# Dynamic range

**Good linearity**

It's needed to use custom Voltages in VME bus:  
5  $\rightarrow$  7.5, 12  $\rightarrow$  15

# Status (1)

Things to be done with this board:

1. ADC replacement.
2. coherent noise
3. Small firmware update: S/N, temperatures read out and a few other things

# Status (2)

We need the new readout system with optical links to make the design ECL data collector and test waveform analysis on the Shaper-DSP module!

The new version of the Shaper-DSP module will be designed by April 2009:

1. ADC redesign
2. The capacitors issue: Tantalum → ceramic (???)
3. Supply
4. Tail compensation for FAM

Thank you

# Backup

# Waveform fitting

$$\chi^2(A, p, t_0) = \sum_{i,j} (y_i - Af(t_i - t_0) - p) S_{ij}^{-1} (y_j - Af(t_j - t_0) - p) \rightarrow \min$$

$A, p, t_0$  – fitting parameters : Amplitude, pedestal and time of the signal

$S_{ij} = \overline{(y_i - \bar{y})(y_j - \bar{y})}$  – covariance matrix,

$f(t)$  – counter response,

$y_i$  – sampled values.

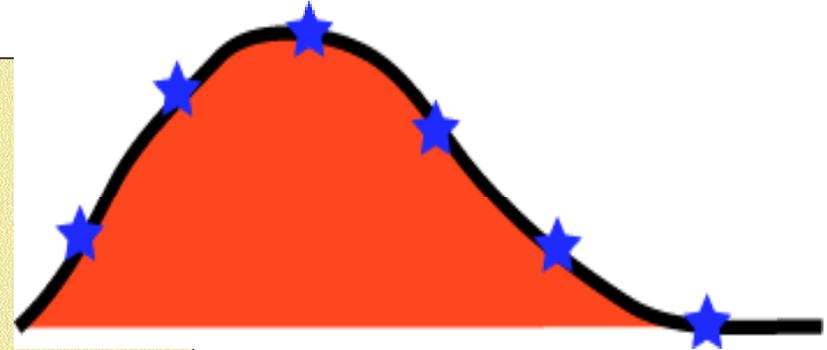

$$Af(t_i - t_1 - \Delta t) = Af(t_i - t_1) - A\Delta t f'(t_i - t_1) = Af(t_i - t_1) + Bf'(t_i - t_1)$$

where  $t_1$  – initial time (trigger time at first iteration),

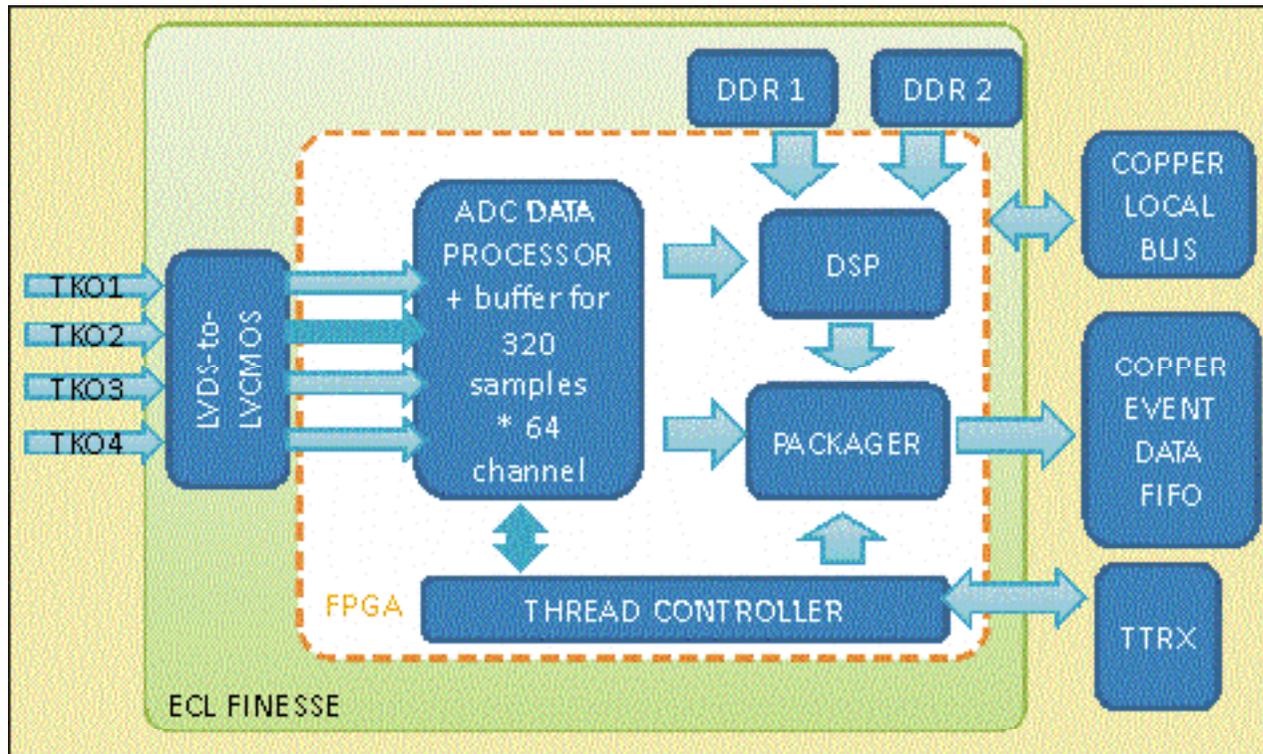

$$t_0 = t_1 + \Delta t, B = -A\Delta t.$$

$$\begin{aligned} \sum_{i,j} f_{i,t_1} S_{ij}^{-1} (y_j - Af_{j,t_1} - Bf'_{j,t_1} - p) = 0 & \quad a_{i_1}^{11} A + a_{i_1}^{12} B + a_{i_1}^{13} p = \sum_i b_{i_1}^1 y_i & \quad A = \sum_i \alpha_{i,t_1} y_i \\ \sum_{i,j} f'_{i,t_1} S_{ij}^{-1} (y_j - Af_{j,t_1} - Bf'_{j,t_1} - p) = 0 & \Rightarrow a_{i_1}^{21} A + a_{i_1}^{22} B + a_{i_1}^{23} p = \sum_i b_{i_1}^2 y_i \Rightarrow B = \sum_i \beta_{i,t_1} y_i; t_0 = t_1 - B / A \\ \sum_{i,j} S_{ij}^{-1} (y_j - Af_{j,t_1} - Bf'_{j,t_1} - p) = 0 & \quad a_{i_1}^{31} A + a_{i_1}^{32} B + a_{i_1}^{33} p = \sum_i b_{i_1}^3 y_i & \quad p = \sum_i \gamma_{i,t_1} y_i \end{aligned}$$

where  $f_{i,t_1} = f(t_i - t_1)$ ,  $f'_{i,t_1} = f'(t_i - t_1)$ , and  $\alpha_{i,t_1}, \beta_{i,t_1}, \gamma_{i,t_1}$  – precomputed coefficients
